

ABSTRACT

The present invention relates to a radiation-curable resin composition which produces
5 a cured film having low surface resistivity and high transparency, a cured film of the
composition, and a laminate including a layer of the cured film. The laminate of the
present invention is suitably used as a hard coat material for preventing scratches or
stains on a plastic optical part, touch panel, film-type liquid crystal element, plastic
container, or flooring material, wall material, or artificial marble as an architectural
10 interior finish; adhesive and sealing material for various substrates; vehicle for printing
ink; or the like
